

Python Classes and Objects - Practice Test

Question No: 1

What will be the output of the following code?

```
class Car:
    def __init__(self, model, year):
        self.model = model
        self.year = year

    def display_info(self):
        print(f"Model: {self.model}, Year: {self.year}")

car = Car("Tesla", 2020)
car.display_info()
```

Model: Tesla, Year: 2020

NameError: name 'car' is not defined

AttributeError: 'NoneType' object has no attribute 'display_info'

None

Question No: 2

What will be the output of the following code?

```
class Book:
    def __init__(self, title, author):
        self.title = title
        self.author = author

book1 = Book("1984", "George Orwell")
book2 = Book("Brave New World", "Aldous Huxley")
print(book1.title + " by " + book2.author)
```

- ☐ 1984 by George Orwell
- ☐ Brave New World by Aldous Huxley
- ☐ Brave New World by George Orwell
- ☒ 1984 by Aldous Huxley

Question No: 3

What will be the output of the following code?

```
class Animal:
    def __init__(self, name):
        self.name = name

    def speak(self):
        print(f"{self.name} says Hello")

dog = Animal("Dog")
cat = Animal("Cat")
dog.speak()
cat.speak()
```

- ☐ NoneCat says Hello
- ☐ Dog says HelloNone
- ☒ Dog says HelloCat says Hello
- ☐ Dog says Hello Cat says Hello

Question No: 4

What will be the output of the following code?

```
class Person:
    def __init__(self, name, age):
        self.name = name
        self.age = age

p1 = Person("John", 25)
p2 = Person("John", 25)
print(p1 == p2)
```

☐ 0

☐ 1

☒ False

☐ True

Question No: 5

What will be the output of the following code?

```
class Circle:
    def __init__(self, radius):
        self.radius = radius

    def __del__(self):
        print("Circle object deleted")

circle = Circle(7)
del circle
```

- ☐ Circle
- ☐ Circle object created
- ☒ Circle object deleted
- ☐ None

Question No: 6

What will be the output of the following code?

```
class Rectangle:
    def __init__(self, length, width):
        self.length = length
        self.width = width

    def area(self):
        return self.length * self.width

rect = Rectangle(5, 10)
print(rect.area())
```

☐ 5

☐ 15

☐ 10

☒ 50

Question No: 7

What will be the output of the following code?

```
class Shape:
    def __init__(self):
        self.type = "Shape"

class Square(Shape):
    def __init__(self):
        super().__init__()
        self.type = "Square"

square = Square()
print(square.type)
```

☐ Shape

☒ Square

☐ Error

☐ None

Question No: 8

What will be the output of the following code?

```
class Counter:
    def __init__(self):
        self.value = 0

    def increment(self):
        self.value += 1

    def reset(self):
        self.value = 0

counter = Counter()
counter.increment()
counter.increment()
counter.increment()
counter.reset()
print(counter.value)
```

☒ 0

☐ 2

☐ 1

☐ None

Question No: 9

What will be the output of the following code?

```
class Student:
    def __init__(self, name, marks):
        self.name = name
        self.marks = marks

    def display(self):
        print(f"{self.name} scored {self.marks}")

s = Student("Alice", 85)
s.display()
```

☐ scored 85

☐ Alice scored None

☒ Alice scored 85

☐ Alice

Question No: 10

What will be the output of the following code?

```
class Employee:  
    salary = 50000  
  
    def display(self):  
        print(self.salary)  
  
e = Employee()  
e.salary = 60000  
e.display()
```

☐ 110000

☒ 60000

☐ 50000

☐ Error
